Grace Yosephine

About Me

Im a student at Institut Teknologi Del, majoring in Software Engineering Technology. I have a strong interest in UX (User Experience) research and am passionate about understanding user behavior to create better, more intuitive digital products. Throughout my studies, I have gained knowledge in software development, including programming languages such as Java, Python, and JavaScript, as well as database management and object-oriented programming.

Im particularly drawn to UX research because it combines technology, psychology, and design thinking—allowing me to explore how users interact with digital systems and how those experiences can be improved.

About Company

Telkom Digital Amoeba is an internal innovation lab established by Telkom Indonesia to foster a culture of intrapreneurship among its employees. Launched in 2017, the program empowers Telkom staff to develop and incubate their own digital startup ideas within the company, providing mentorship, resources, and a structured framework to bring these innovations to life.

One of Digital Amoeba's flagship initiatives is IdeaBox, a comprehensive crowdsourcing platform designed to streamline the innovation process. IdeaBox facilitates idea submission, team formation, real-time insights, and event management, creating an ecosystem where creative solutions can be nurtured and connected with potential investors.

Through these initiatives, Telkom Digital Amoeba has successfully launched several digital products, such as Emago, a game streaming service, and Arkademy, an online learning platform for vocational students. By leveraging internal talent and fostering a startup mindset, Telkom Digital Amoeba plays a pivotal role in driving the company's digital transformation and contributing to Indonesia's broader digital ecosystem.

Project Portfolio

Background

The IdeaBox platform enables users to submit innovative ideas for investor funding. Data analysis reveals a significant drop-off after the notification stage, preventing many users from publishing their ideas on the investor dashboard. This project aims to identify barriers and propose solutions to improve conversion rates.

Problem Statement

Many IdeaBox users abandon their journey after receiving notifications, resulting in low conversion to the final stage of publishing ideas on the investor dashboard. The goal is to increase the number of users completing the submission process by addressing pain points through data analysis, surveys, and usability testing.

Project Portfolio

Available Data

- User Activity (Jan–Mar 2022): Total, new, and returning users.
- Funnel Data: User progression through eight stages of idea submission.
- Demographics (Mar 2022): Age, gender, geography, interests, and session duration from Google Analytics.

1. Data Analysis

Strategy

To strengthen the background and identify bottlenecks, I analyzed the provided Excel dataset focusing on:

- Month-to-Month User Growth: To assess platform adoption trends.
- User Type Analysis: To understand the proportion of new vs. returning users.
- Funnel Analysis: To pinpoint the stage with the largest drop-off.

1. Data Analysis

Results and Explanation

a. Month-to-Month User Growth

- Total users: January (143,274), February (154,321), March (167,864).
- Growth rates:

  1) Jan to Feb: (154,321 - 143,274) / 143,274 × 100 = 7.71%

  2) Feb to Mar: (167,864 - 154,321) / 154,321 × 100 = 8.77%

Explanation

The 7–8% monthly growth indicates strong user acquisition, but conversion within the submission funnel needs improvement to capitalize on this trend.

1. Data Analysis

1. Data Analysis

Results and Explanation

b. User Type Analysis

- March 2022:

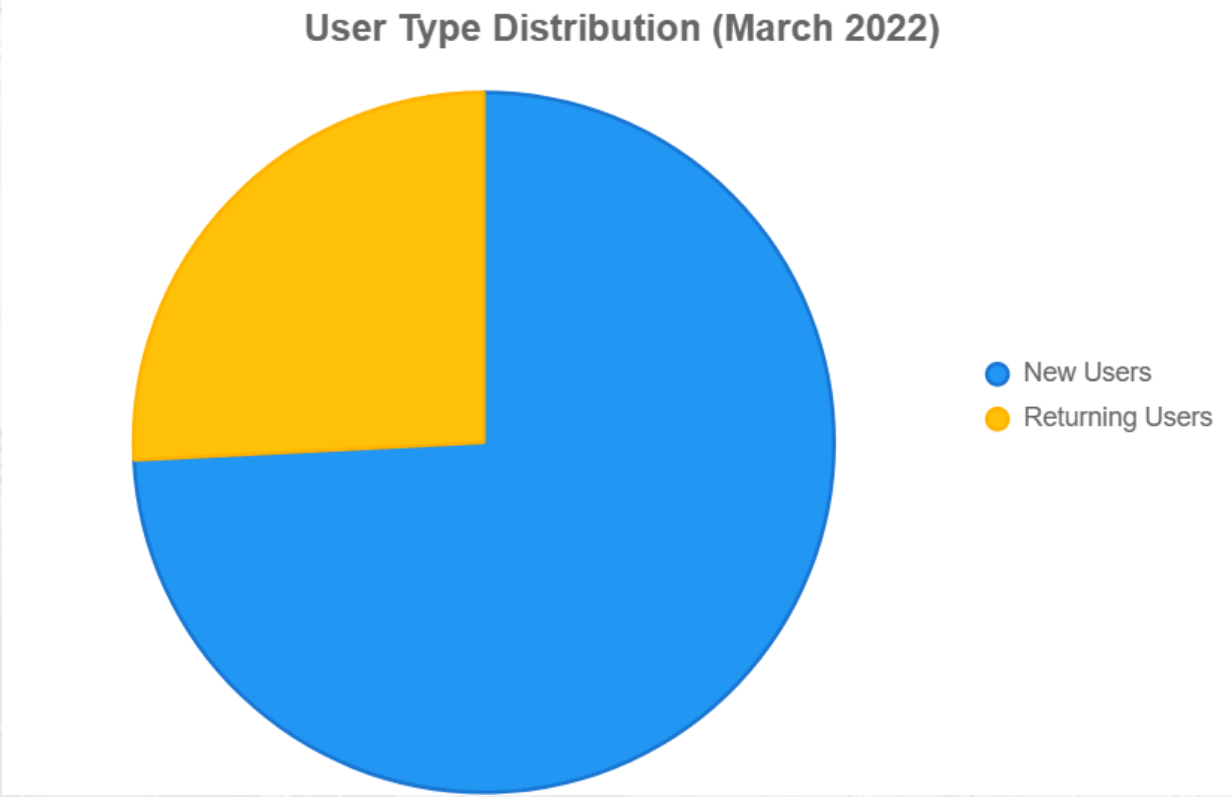
  1) New Users: 124,528 (74.2%)

  2) Returning Users: 43,336 (25.8%)

Explanation

The high proportion of new users (74.2%) reflects effective acquisition but highlights the need for retention strategies to increase returning users, who may be more likely to complete submissions..

1. Data Analysis



1. Data Analysis

Results and Explanation

c. Funnel Analysis

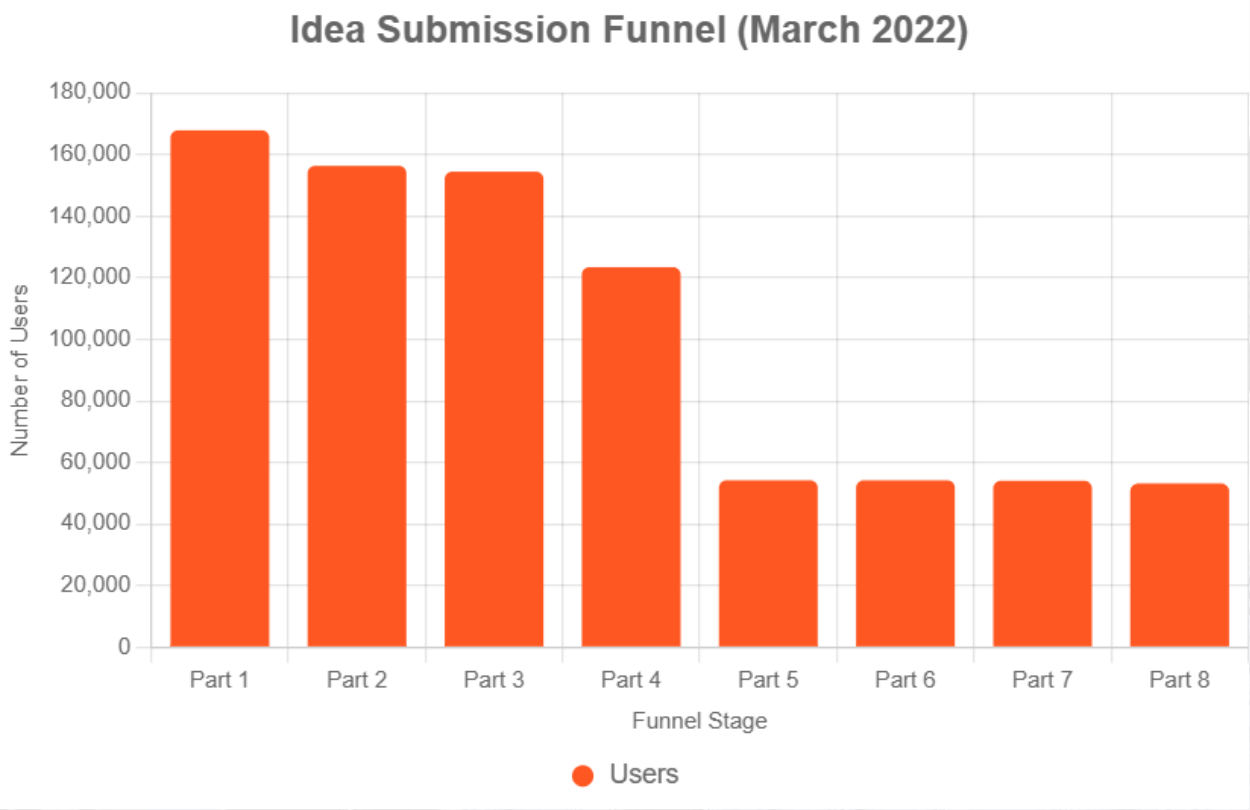
- March 2022 funnel:

1) Part 1 (Choose Submit Idea): 167,864
2) Part 2 (Input Data): 156,342 (6.8% drop)
3) Part 3 (Input Prototype): 154,442 (1.2% drop)
4) Part 4 (Receive Notification): 123,423 (20.1% drop)
5) Part 5 (Open Email Confirmation): 54,231 (56.0% drop)
6) Part 6 (Terms and Conditions): 54,221 (0.02% drop)
7) Part 7 (Preview Idea): 54,110 (0.2% drop)
8) Part 8 (Publish Idea): 53,210 (1.7% drop, 68.3% drop from Part 1)

Explanation

The largest drop-off (56%) occurs between Part 4 and Part 5, suggesting users are confused about checking their email or find the notification unclear.

1. Data Analysis



1. Data Analysis

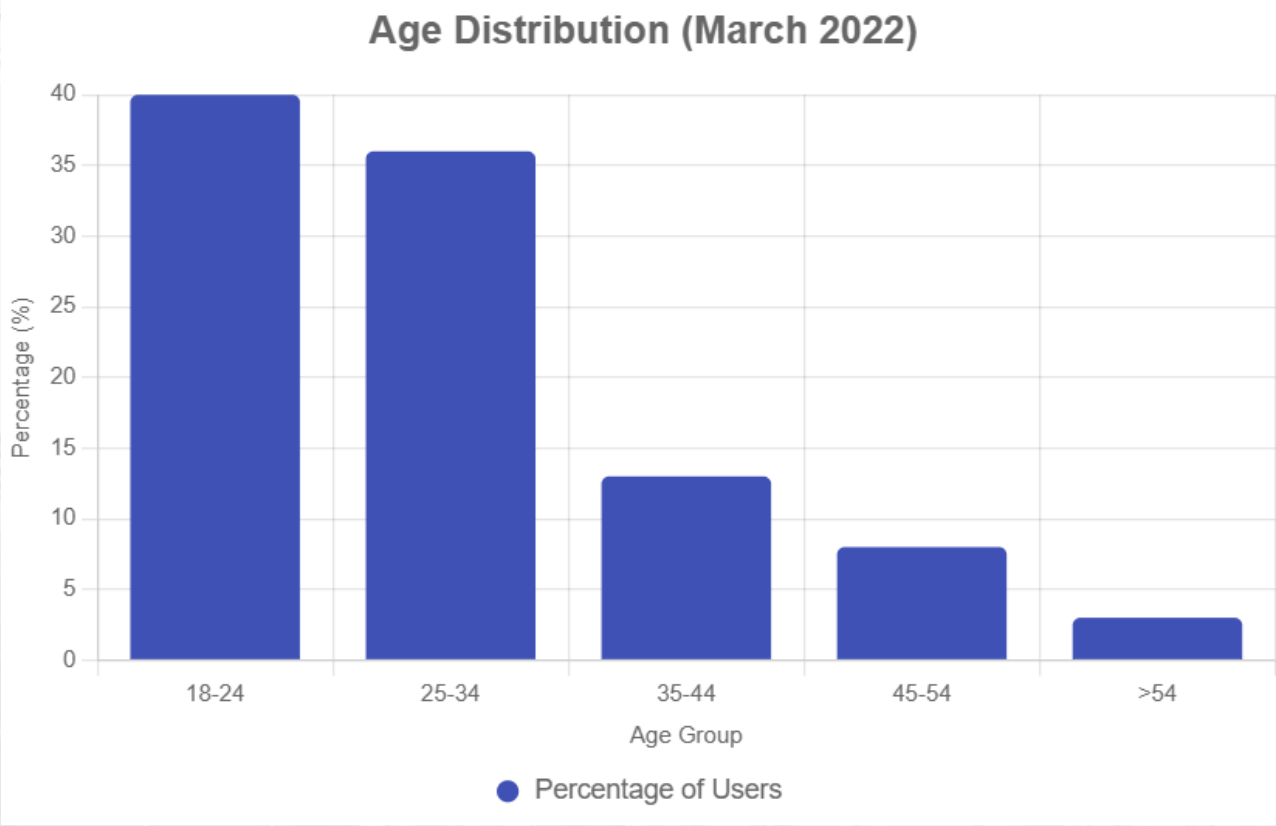
Demographic Insights

- Age (Mar 2022): 18–24 (40%), 25–34 (36%), 35–44 (13%), 45–54 (8%), >54 (3%)
- Gender: Male (53%), Female (47%)
- Geography: Jakarta (24%), Surabaya (18%), Bandung (15%)
- Session Duration: 61–180s (34%), 181–600s (26%)

Explanation

Young adults (18–34, 76%) dominate, with balanced gender distribution. Moderate session durations suggest engagement but potential interface complexity.

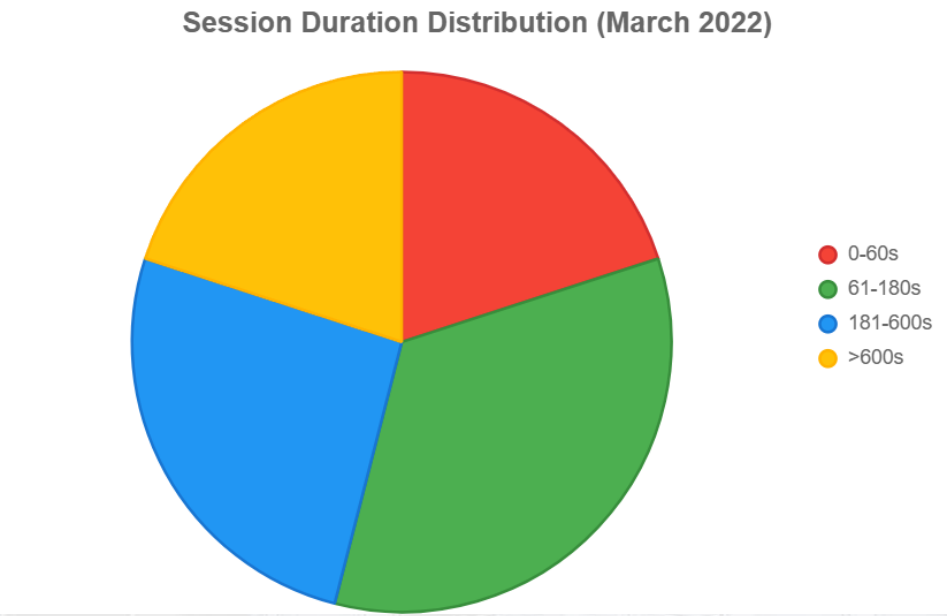
1. Data Analysis



1. Data Analysis

Session Duration Distribution

This diagram shows session duration to assess engagement. The high percentage of short sessions (61–180s, 34%) suggests users may find the process complex, contributing to drop-off.



2. Research Plan

Strategy

To address the 56% drop-off between Part 4 and Part 5, I designed a research plan using surveys and usability testing (UT) to identify barriers and improve conversion to the investor dashboard.

Result and Explanation

a. Background

The 56% drop-off between receiving notifications and opening email confirmations indicates users are confused about next steps or unaware of the need to check their email.

b. Business Objective

Increase the percentage of users completing the idea submission journey to publish on the investor dashboard by 20% within six months.

2. Research Plan

c. Support Metrics

- Conversion rate from Part 4 to Part 8 (current: 43.1%, target: 51.7%).
- Single Ease Question (SEQ) score post-UT (target: average ≥5 on 1–7 scale).
- Time spent on email confirmation and subsequent steps (target: <5 minutes).

d. Stakeholder Mapping

- Primary: Product Manager, UX/UI Designers, Developers.
- Secondary: Marketing Team, Investors.
- Users: Idea submitters (new and returning).

e. Methods

- Survey: To collect qualitative data on user perceptions and barriers.
- Usability Testing (UT): To observe real-time interactions and pinpoint pain points.

2. Research Plan

f. Research Schedule

- Week 1: Data analysis, survey design.
- Week 2: Survey distribution, collection.
- Week 3: Usability testing sessions.
- Week 4: Analysis, recommendations.

2. Research Plan

g. Research Questions

- Why do users abandon after receiving notifications?
- What barriers prevent email confirmation completion?
- How can notifications and the interface be optimized?

h. Research Goals

- Identify pain points in the notification and email confirmation process.
- Develop recommendations to streamline the user journey.

i. Participants

- IdeaBox Users (10): Users who dropped off at Part 4 or 5.
- Non-Users (5): Registered users who never submitted ideas.

Explanation: Participants target young adults (18–34, 76% of users) to ensure relevant insights.

3. Screening Questions

Strategy

Screening questions select participants for UT, targeting IdeaBox users and non-users, focusing on demographics, behavior, and interview willingness.

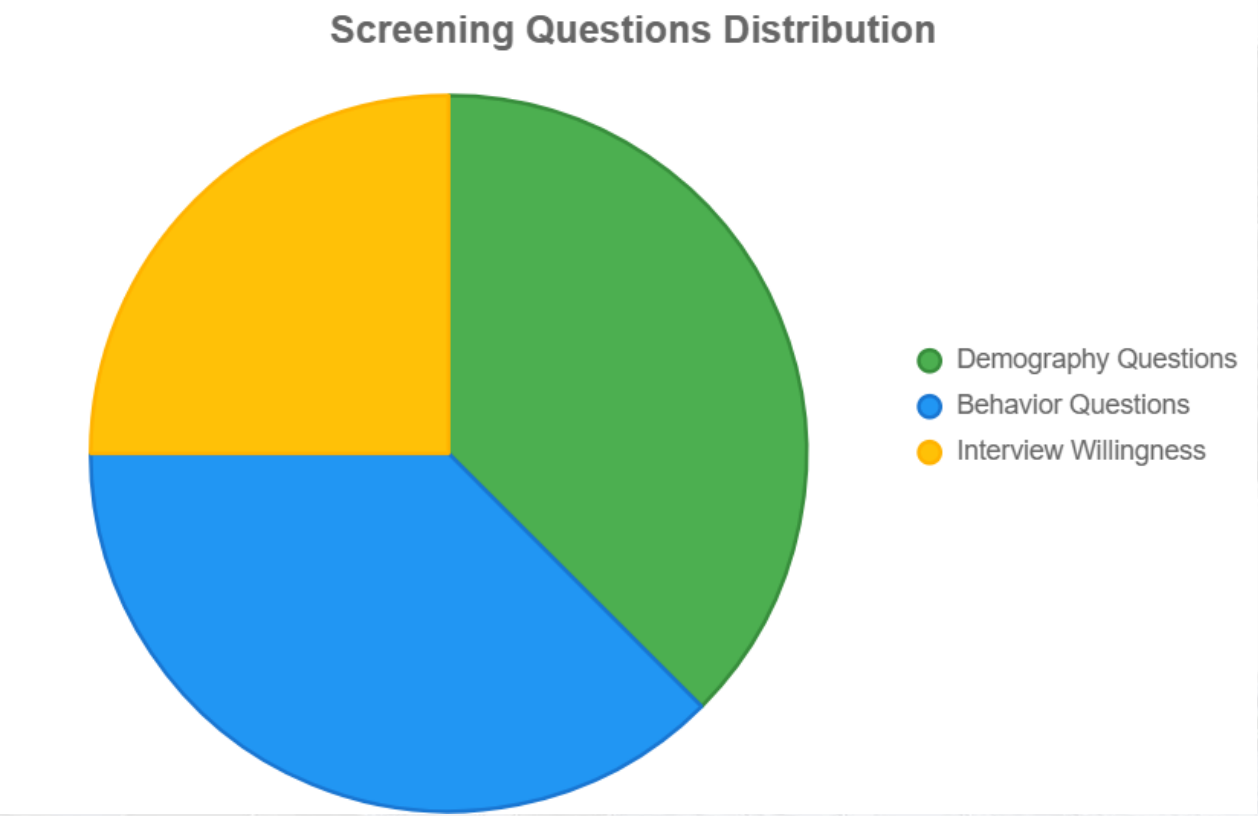
Explanation

Questions target the 18–34 demographic, assess drop-off stages (especially Part 4–5), and confirm UT participation. The open-ended question provides insights into barriers like notification clarity.

3. Screening Questions

Category	Question	Type
Demography	What is your age group? (18–24, 25–34, 35–44, 45–54, >54)	Multiple Choice
Demography	What is your gender? (Male, Female, Other)	Multiple Choice
Demography	In which city do you reside?	Open-ended
Behavior	Have you used IdeaBox to submit an idea? (Yes/No)	Yes/No
Behavior	If yes, at which stage did you stop? (Choose Submit Idea, Input Data, Input Prototype, Notification, Email Confirmation, Terms, Preview, Publish)	Multiple Choice
Behavior	What challenges did you face while using IdeaBox?	Open-ended
Interview Willingness	Are you willing to participate in a 30-minute usability testing session?	Yes/No
Interview Willingness	If yes, provide your preferred contact method (Email/Phone).	Open-ended

3. Screening Questions



4. Task UT

Strategy

UT tasks simulate the submission process, focusing on the 56% drop-off between Part 4 and Part 5. The SEQ scale (1–7) is visualized as a doughnut diagram with hypothetical data to reflect anticipated usability outcomes.

Results and Explanation

Scenario:

You are an innovator seeking to submit a business idea on IdeaBox to attract investors and realize your idea.

Task No.	Task Description
1	Navigate to "Submit Idea" and input idea details.
2	Upload a prototype of your idea.
3	Respond to the notification and open email confirmation.
4	Complete the terms and conditions form.
5	Preview and publish your idea on the dashboard.

4. Task UT

Post-UT Questions:

1. Describe what you did to complete each task.
2. What did you like about the process?
3. What did you find difficult or frustrating?
4. Rate the ease of completing the tasks on a scale of 1–7 (SEQ: 1 = Very Difficult, 7 = Very Easy).
5. What improvements would make the process a 7?

Explanation

Tasks focus on Part 4–5 to investigate the drop-off. The SEQ diagram uses hypothetical data based on anticipated UT outcomes, reflecting challenges at Part 4–5 (lower scores) and easier tasks like Part 1 and 5 (higher scores).

4. Task UT

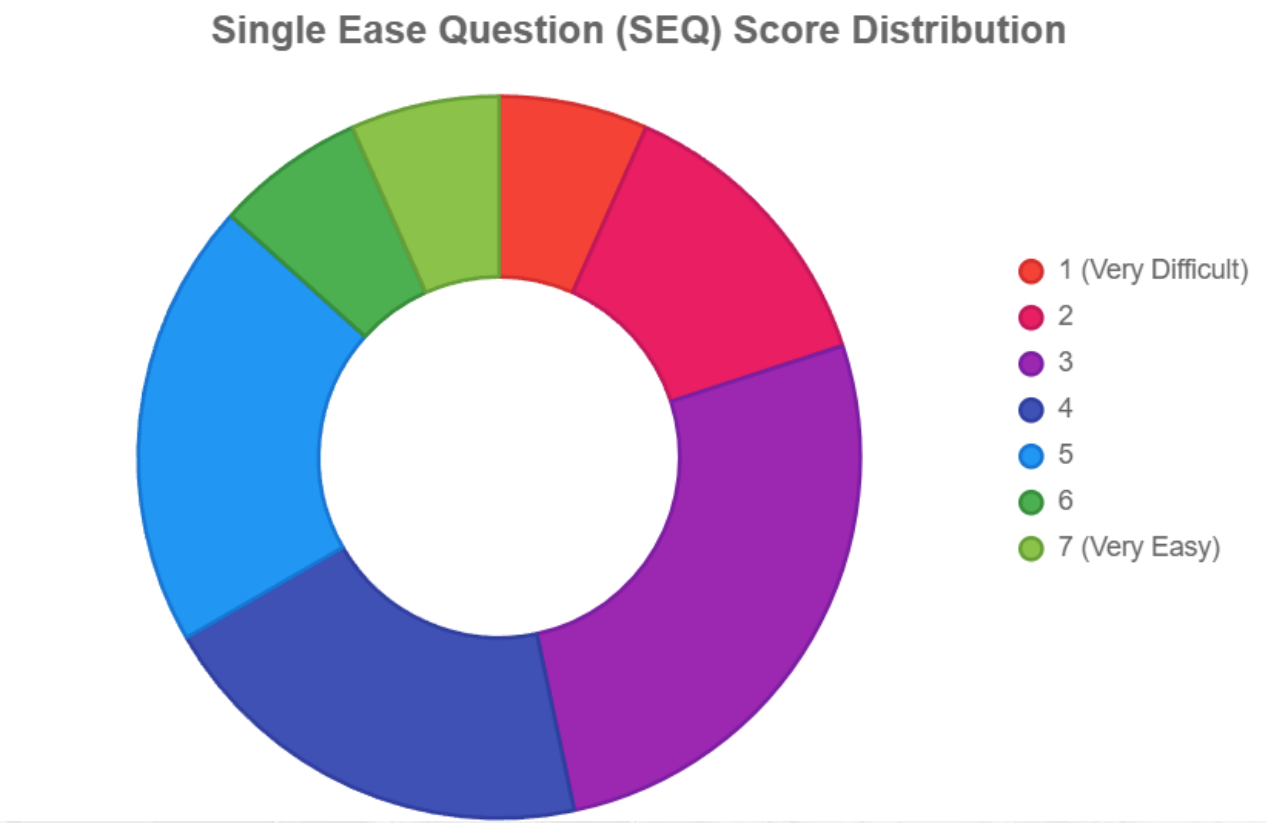
SEQ Scale Diagram:

- **Data Source:** Hypothetical SEQ scores from 15 participants (10 IdeaBox users, 5 non-users), assuming challenges with notification/email confirmation (Task 3) result in lower scores, while navigation and publishing are rated higher.

- **Scores (average counts):** 1 (1 user), 2 (2 users), 3 (4 users), 4 (3 users), 5 (3 users), 6 (1 user), 7 (1 user).

- **Explanation:** The distribution peaks at 3–4, indicating moderate difficulty, particularly for Task 3, aligning with the 56% drop-off. Higher scores (6–7) reflect easier tasks like navigation and publishing.

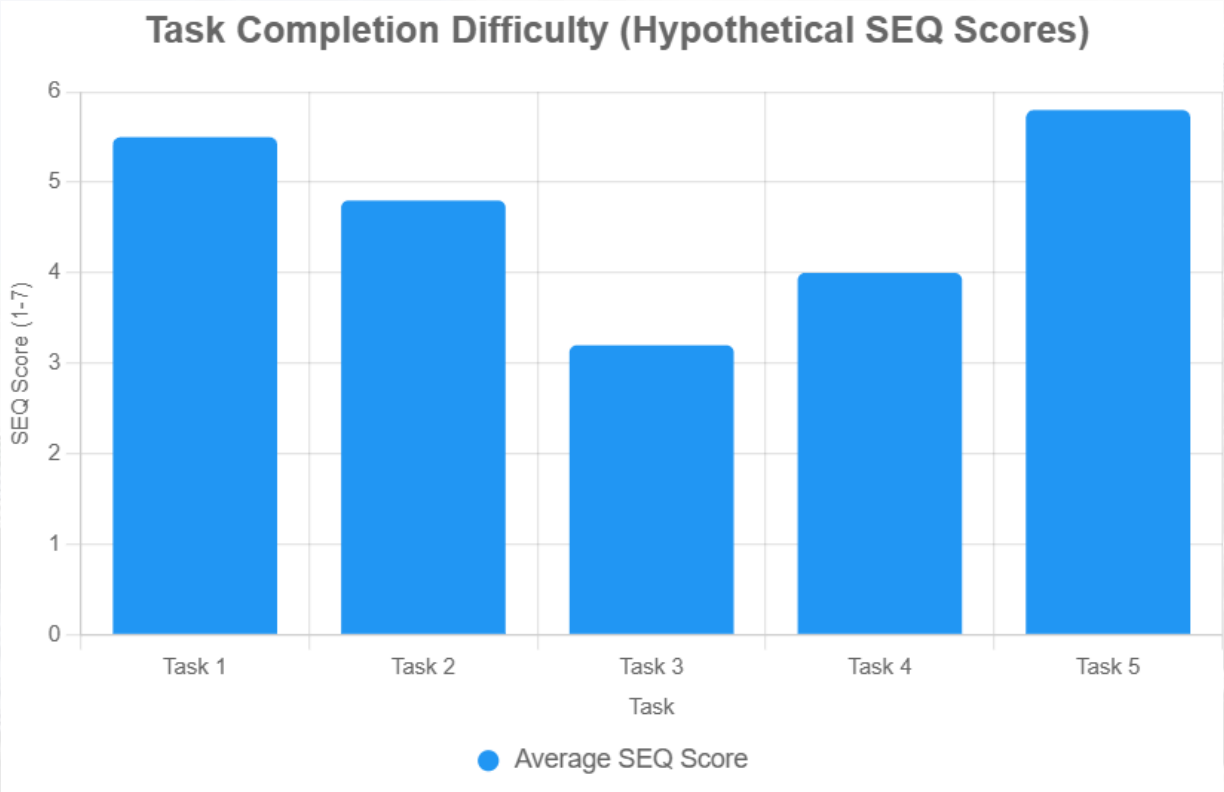
4. Task UT



Single Ease Question (SEQ) Score Distribution
1 (Very Difficult)
2
3
4
5
6
7 (Very Easy)

4. Task UT

Task Completion Difficulty Explanation: This diagram ranks UT tasks by anticipated SEQ scores (hypothetical averages), highlighting Task 3 (notification/email) as the most difficult, aligning with the funnel drop-off.



5. Insights & Recommendations

Strategy

Using an empathy map, I mapped anticipated insights from survey and UT data to understand user pain points and propose recommendations to address the drop-off.

Results and Explanation

Category	Insight
Think and Feel	Thinks: "I thought the journey was complete after receiving the notification." Feels: Frustrated due to the lengthy process and numerous requirements.
Hear	Notifications that do not clearly indicate further steps are required.
Say	Interface that feels long and inefficient with too many input fields.
See and Do	Says: "This process is too long and has too many requirements to input." Does: Stops midway through the process, assuming it is complete.

5. Insights & Recommendations

Recommendations:

1. Simplify the Process: Reduce required input fields in the terms and conditions stage or provide detailed guidance on acceptable file formats (e.g., PDF, JPG).
2. Clear Notifications: Include explicit instructions, e.g., "Check your email to continue your submission."
3. Enhanced Email Communication: Add a prominent call-to-action button in confirmation emails.
4. Progress Indicators: Implement a progress bar to show the user's position in the journey.
5. Onboarding Guide: Introduce a short video or tooltips to explain the submission process.

Explanation

Insights confirm user confusion and frustration, aligning with the 56% drop-off at Part 5 and the SEQ diagram's lower scores for Task 3. Recommendations address these by simplifying inputs, enhancing clarity, and guiding users.

5. Insights & Recommendations

5. Insights & Recommendations

Insight Distribution

Explanation: This diagram visualizes the distribution of insights across empathy map categories, emphasizing “Think and Feel” and “Say and Do” as dominant pain points.
